Concrete Pumping Seminar

Have you... ever wondered just how concrete pumps work? Ever been on a job arguing over air and/or slump loss in concrete going through a pump?

Well, now is your chance. This seminar will cover pump design and operation, concrete pumping safety, and technical aspects and various specifications of air-entrained concrete.

There will also be an on-site test to demonstrate how air loss can occur when pumping concrete based upon different factors which can be influenced solely by the pump and its operator.

Three different sized concrete pumps will be available for viewing and inspection. Experienced, certified pump operators will also be present for discussion.

Representatives will be onsite from one of the largest concrete pumping companies in the nation and multiple concrete producers to answer all of your questions.

This Seminar is intended for:

- DOT Professionals
- Bridge Contractors
- Engineers (3 PDHs provided)
- Construction Superintendents
- Construction Project Managers
- Concrete Contractors
- Testing Agencies
